

# DENTATUS POST SYSTEMS - OVERVIEW

## Dentatus Classic Surtex® Posts

The Dentatus Classic Surtex post has a micro-texturized metal finish, creating two-fold increase of retention compared to machined surfaces. The treated metal surface increases retention to acrylic resins and significantly reduces micro leakage. Their matte finish reduces glare for better aesthetics.

## Dentatus Luscent Anchors®

Luscent Anchors non-metallic posts transmit light for curing composites within the deep confines of canals providing anchorage and flawless aesthetics. Resin reinforced fiberglass Luscent Anchors fulfill dentistry's preference for very strong, non-metallic posts that are consistent with conventional adhesive techniques and materials to support core foundations and aesthetic restorations. The radioluscent anchors transmit tooth color without being visible under the most adverse light conditions. They also provide a sound core-crown gingival interface radiating natural color through soft and hard tissues surrounding teeth.

# DENTATUS TWIN LUSCENT ANCHORS®

FIBERGLASS RESIN DENTAL ANCHOR WITH AN INNOVATIVE DESIGN

## A Winning Combination of Light Transmission, Attractive Aesthetics and Twice the Retention

### The Advantages

- Design provides extra high retention
- Glass fiber material for high aesthetics
- High adhesion
- Twice the invention
- Twice the retention

The Twin Luscent Anchor is based on the Luscent Anchor. The design is a visible assurance against accidental debonding of adhesive and resin-core materials.

Dentatus has raised the standard of excellence with the Twin Luscent Anchors. This innovative design is your visible assurance against accidental debonding of adhesive and resin-core materials. The slim mid-section creates a "physical choke." The vent groove eliminates air resin entrapment and prevents rotational dislocation. It all adds up to a winning combination of light transmission, attractive esthetics and twice the retention.\*
