

Dentatus Helix Reamers

With sharp cutting edges, they have high cutting capacity, smooth cutting action and improved transport of cutting debris. Available in Classic and Conical shapes.

Dentatus Standard Reamers

The Original Dentatus reamer. Available in Classic and Conical shapes.

Dentatus Special Reamers

The Probos I Pathfinder is ideal for initial and safe removal of root filling material. The tip design minimizes the risk for perforation of the dentinal walls.

The Probos II Reamer/Router increases the surface by indenting the dentinal wall to improve retention, when used laterally in the canal.
